

INSULATED COVERS

Four Seasons Building Products presents the Elitewood™ Insulated Patio Cover. Finally, a patio cover offering great looks and outstanding performance expected by homeowners everywhere. This "Ultimate" Patio Cover will be the last patio cover you will ever need to purchase. Insulated Laminated Roof Panels (LRP) are manufactured with high density expanded polystyrene cores (EPS) that are uniformly bonded with heavy gauge textured aluminum skins. The resulting one-piece insulated panel system creates a patio cover with superior strength, long term durability, high performance insulating characteristics and a very pleasing aesthetic shade structure that will enhance your outdoor living area.

Elitewood's™ Insulated roof panel creates a thermal barrier system that will not radiate heat which is common on single "skin" or non-insulated patio covers.

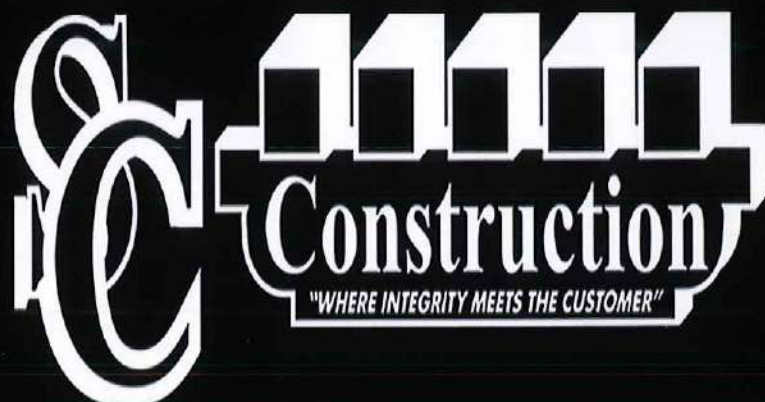

Elitewood's™ Insulated Roof Panels create a noise absorbing patio cover system that reduces the loud sounds made by heavy rain and hail. This insulated sound absorption is not common with "single skin" or non-insulated patio cover systems.

Classic IRP house wall attached with standard 2x6 post wraps, and a single 3x8 beam.

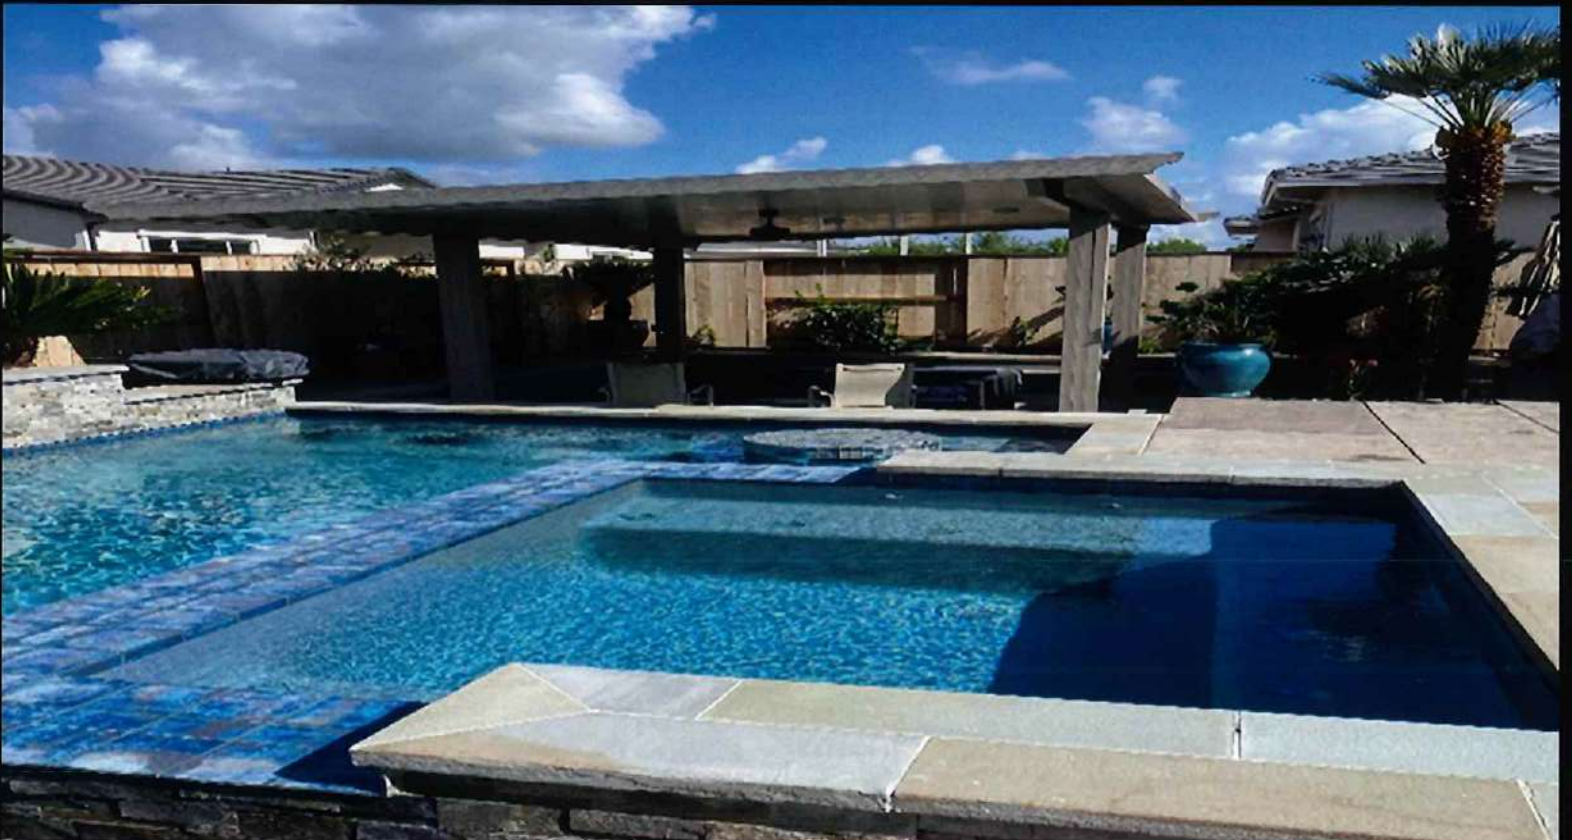

Driftwood IRP cover eave attached with single 3x8 beam, and standard post wraps.
